

The Hungarian Nuclear Society (HNS) and the Norwegian Nuclear Association (NNA), hereinafter referred to as "the Parties", share an interest in strengthening cooperation between the Hungarian and Norwegian nuclear communities and promoting knowledge exchange, competence development and collaboration in the peaceful uses of nuclear science and technology.

Through this Memorandum of Understanding, the Parties intend to establish a practical and continuing framework for bilateral cooperation.

1. Areas of cooperation

The Parties intend to:

- a) facilitate contacts and cooperation between their members and relevant organisations, including industry, research and educational institutions, public-sector stakeholders and professional networks in Hungary and Norway;
- b) exchange information and experience concerning nuclear developments, technologies, research, education, competence development, regulation, stakeholder engagement and other areas of common interest;
- c) identify and facilitate opportunities for cooperation between Hungarian and Norwegian organisations, including joint projects, research and innovation activities, education and training, and industrial and supply-chain cooperation;
- d) organise or support joint conferences, workshops, seminars, technical exchanges and other professional activities;
- e) facilitate participation in relevant activities and events organised by either Party, where appropriate;
- f) support exchanges involving students, young professionals, experts and other members of the respective nuclear communities;
- g) cooperate, where useful, on publications, professional communication, public information and activities in relevant European and international forums; and
- h) explore other areas of cooperation agreed between the Parties.

2. Regular coordination

Representatives of HNS and NNA intend to meet regularly, normally one to two times per year, primarily online.

These coordination meetings will be used to exchange information on current activities, review ongoing cooperation, identify opportunities involving the members and networks of the two Parties, and agree practical priorities for the following period.

3. Bilateral visits

The Parties aim to organise one face-to-face bilateral visit each year, normally alternating between Hungary and Norway. The frequency, timing and location may be adjusted according to current priorities, opportunities and practical circumstances.

Such visits should provide an opportunity not only for representatives of HNS and NNA to meet, but also for wider delegations of relevant organisations and professionals from the visiting country to engage with counterparts in the host country.

Depending on the interests identified for each visit, the programme may include meetings with companies, research and educational institutions, nuclear facilities, public-sector organisations and other relevant stakeholders, as well as technical visits, workshops or networking activities.

The visits are intended to strengthen professional relationships, improve mutual understanding of capabilities and nuclear activities in the two countries, and identify concrete opportunities for projects, knowledge exchange, research, education and industrial cooperation.

The scope and programme of each visit will be agreed between the Parties and may, where useful, be coordinated with relevant conferences or other nuclear-sector activities.

4. Coordination and points of contact

Each Party will maintain a designated point of contact responsible for coordinating communication and supporting implementation of the cooperation under this MoU. The initial designated points of contact are:

Hungarian Nuclear Society

Margit Fábián

President

elnok@nuklearis.hu

Norwegian Nuclear Association

István Szőke

Acting Director

istvan.szoke@norwegiannuclear.no

Either Party may update its designated point of contact by informing the other Party. Each Party will maintain a designated point of contact throughout the duration of this MoU, and changes to the designated contact do not require amendment of the MoU.

5. Implementation

Activities under this MoU will be developed by mutual agreement and according to the interests and available capacity of the Parties and participating organisations.

Where a specific activity requires funding, contractual arrangements or other formal commitments, these will be considered separately by the organisations concerned.

This MoU expresses the Parties' intentions for cooperation and does not create legal or financial obligations.

6. Duration

This MoU takes effect on the date of signature and is intended to provide a continuing framework for cooperation. It may be reviewed, amended or discontinued at any time by mutual agreement between the Parties.

Signed in two counterparts in the English language.
